Business Analyst / Business Systems Analyst / IT Project Lead with **2+ years of experience** across ERP transformation, e-commerce order-to-cash automation, finance workflows, inventory control, procurement optimization, quality inspection automation, API integrations, SQL validation, UAT, and stakeholder-led delivery. Currently reporting to the CEO and coordinating a **6-member IT development team** to convert operational problems into scalable ERP, SaaS-style, and FinTech-relevant workflows.

Core Skills & Keywords

- **Business Analysis:** Requirement Gathering, BRD, FRD, Process Flow Diagrams, Gap Analysis, RCA, User Stories, Acceptance Criteria, RTM, SOPs, UAT, Change Management, Go-Live Support.
- **Systems & Product:** ERPNext/Frappe, Shopify, Shiprocket, GST E-Invoicing, Bank APIs, Webhooks, API Mapping, Data Mapping, Error Handling
- **Data & Tools:** SQL, Postman, Python, Excel/Sheets, ERP Reports, Data Validation, Reconciliation, Workflow Automation.
- **Domains:** Order-to-Cash, Payments/Refunds, Finance Operations, Inventory, Procurement, Warehouse, Quality Inspection, Refurbishment Operations, SaaS/FinTech Workflows.
- **Delivery:** Agile/Scrum, Sprint Planning, Stakeholder Management, Risk Tracking, UAT Planning, User Training.

Professional Experience

Newjaisa Technologies

Nov. 2024 – Present

Business Analyst & IT Project Lead

Bengaluru, India

- Own BA/BSA responsibilities for ERP and integration workstreams, reporting to the CEO and coordinating a **6-member IT team** across requirement discovery, sprint execution, UAT, go-live, and production support.
- Used **SQL, ERP reports, Postman, API/webhook testing, and data mapping** to validate business logic, debug failed syncs, reconcile records, and support data-driven decisions.
- Improved business outcomes through automation: **54% faster inspection, 13 minutes saved per laptop**, missed Material Requests reduced from **26% to 8–10%**, refund processing time reduced by **40%**, and order sync accuracy improved by **30%**.
- Documented BRDs, FRDs, API mapping, data mapping, validation logic, process flows, UAT cases, SOPs, and rollout plans for cross-functional users and developers.

Newjaisa Technologies

Mar. 2024 – Nov. 2024

Process Engineer Intern → Full-time

Bengaluru, India

- Mapped shop-floor, warehouse, production, and quality workflows to identify manual bottlenecks, repacking leakages, inventory mismatches, and Excel-dependent processes.
- Supported ERP utility design, data cleanup, user adoption, and process standardization; identified a **6% repacking leakage** and helped design governance controls.

Business Impact Projects

- **Shopify–ERP Sales Order Integration:** Designed webhook-based Shopify to ERP order sync for **100+ daily orders**. Mapped customer, SKU, order, tax, and item-level fields; supported Postman testing, SQL validation, email alerts, and sync logs. Eliminated manual order entry, reduced duplicate/missed orders, and improved near real-time O2C visibility.
- **Quality Inspection Automation Program:** Replaced Excel-based inspection with ERP grading, NJQCA hardware capture, and auto-Material Request triggers. Reduced inspection time from **24 to 11 minutes per laptop** and reduced missed MRs from **26% to 8–10%**.
- **GST E-Invoicing & Bank Payment Workflow:** Designed one-click GST e-invoice generation from ERP through API mapping, tax validation, IRN update flow, error handling, and payable dashboards. Improved finance productivity, compliance accuracy, approval visibility, and payment workflow control.
- **Auto Procurement & Cost Optimization Engine:** Designed demand-based procurement logic using consumption trends, pending repair needs, vendor-wise price history, and purchase patterns. Enabled data-driven purchasing, reduced overstocking/stock-outs, and supported **8–12% procurement cost optimization**.
- **Component Tracking & Inventory Control:** Built ERP process for tracking parts issued, consumed, returned, and replaced during refurbishment. Defined quantity restrictions, audit trails, mismatch alerts, and exception rules to improve accountability and reduce missing components/repacking cases.
- **Logistics, Payments & Workflow Governance:** Supported Shiprocket API integration, banking/refund workflows, warehouse utilities, and movement restrictions. Reduced shipment booking effort from **25 clicks to 3** and improved operational compliance through system controls.

Education & Certifications

Sri Venkateswara College of Engineering

2020 – 2024

Bachelor of Engineering | CGPA: 7.77

Bengaluru, India

- **Business Analysis & Process Management** – Coursera, 2025
- **Practical SQL, API Testing & ERP Systems Exposure** – Applied through live enterprise projects
